W08 – Problem Solving

CASE STUDY – Possible Solutions

2. (using bike)

- Show the shipped_date

- Add 2 months to each shipped_date

- Format that date so it takes the format of Month name, number day with comma and then a 4-digit year. For example, January 14, 2019

SELECT shipped_date, DATE_FORMAT(DATE_ADD(shipped_date, INTERVAL 2 MONTH), '%c / %e / %y') AS '2 months after shipped'
FROM cust_order;

3. (using magazine)

- Find any string with 'Ma", then, we want to take from that word on and take if off the magazine name

SELECT LEFT(magazineName, LOCATE('Ma', magazineName)-1)
FROM magazine
WHERE magazineName LIKE '%Ma%';

- What if we just wanted that 'Ma' string and beyond to show up?

SELECT SUBSTRING(magazineName, LOCATE('Ma', magazineName))
FROM magazine;

SELECT RIGHT(magazineName,LENGTH(magazineName) - LOCATE('Ma', magazineName)+1)
FROM magazine
WHERE magazineName LIKE '%Ma%';
