# Database Driven Browser Application

In response to a request to have a virtual gallery, web based, database application with a CMS for client editing and additions; we welcome you to the Virtual Gallery.

art.byuiwebdev.com

The owner/manager of the gallery, invited students in to research the needs she had for a virtual, large touch-screen, gallery. Users could search by a variety of different criteria including keywords/subjects associated with each artwork. Current keywords/Subject entries that are a part of the database include: *people, landscape, girl, blue, flower, and woman.*
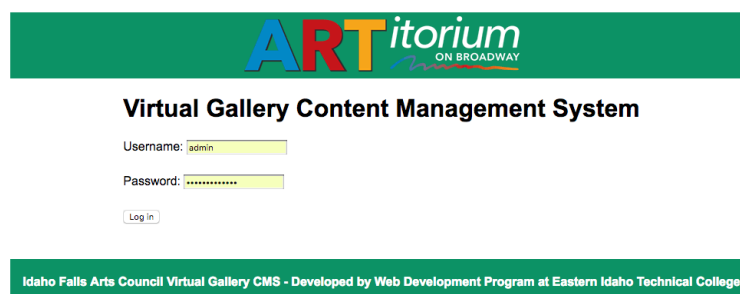

Users would be able to touch (click) a thumbnail image and it would fill the screen and they could see more information about the artwork and be able to zoom in on the image.

The owner also requested a user-friendly, back-end CMS where she could add, edit, or delete her own database information (artists, artwork, keywords, etc).

art.byuiwebdev.com/admin/main.php

This portion of the application was not available to the public and would only be used by an admin such as the owner This portion requires a login: (**Username: admin and Password: ArtAdmin202!**)

Here she could add, edit, or delete, artist or artwork.

Manage Artwork Entries
